# STAINLESS STEEL LOCKS

The Lock Focus range of stainless steel locking and latching components are ideal for Marine, Rail, Infrastructure and Mining industries where the conditions test the most resilient of materials.

Stainless steel in grades of 304 and 316 provide greater longevity of the locking system minimising rust and wear.

Our standard range of products in stainless steel includes square back bolt locks, 2-point catches, quarter turns, camlocks and padlockable swing handles.

To improve your security, our products have many access levels. Our key system is unique and not available from other sources.

We offer a key register service and restrict the supply of keys to approved companies and personnel.

Lock Focus provides an in-house design and consultancy service that is dedicated to designing and improving products in both standard materials and stainless steel.

Our team are experts in their field and are happy to consult with you to find a solution to your requirements.

Previously, we have designed and manufactured high security padlocks, crew door locks, interlocking switch locks and barrier devices in stainless steel to meet specific customer requirements.

These products have been applied to air conditioning hatches, boat hatches, rail level crossings, cabin doors and switchboards.
